

Python/Django User & System Movement Tracking Libraries

This PDF contains details of commonly used Python libraries/modules to track user movement, system activity, file changes, and web user actions in Windows/Linux.

1■■■ Mouse/Keyboard Tracking

- Library: pynput
- Use: Track mouse and keyboard events in real-time.
- Platform: Windows, Linux, Mac
- Notes: Suitable for capturing input events for monitoring purposes.

2■■■ File System / Directory Tracking

- Library: watchdog
- Use: Monitor file and folder changes (create, modify, delete).
- Platform: Windows, Linux, Mac
- Notes: Good for logging file system activity in real-time.

3■■■ Process / System Activity Tracking

- Library: psutil
- Use: Monitor running processes, CPU, memory usage, network activity.
- Platform: Windows, Linux, Mac
- Notes: Useful for system monitoring and analytics.

4■■■ Web App User Activity Tracking (Django)

- Approach: Middleware or third-party packages.
- Libraries/Packages: django-tracking, django-activity-stream
- Use: Track user page visits, actions, login/logout in web applications.
- Platform: All (Django apps)
- Notes: Useful to monitor user behavior and engagement on web apps.

■■ Summary of Tracking Libraries

- pynput: Real-time mouse/keyboard events
- watchdog: File and directory changes

- psutil: System processes, CPU, memory, network
- Django Middleware / django-tracking: Web user actions and page visits
